

Adair Chávez Roveglia

Ljubljana, Slovenia · yadaxim@gmail.com · github.com/Yadaxim

AI/LLM Engineer | Data Engineer | Applied AI Developer

Summary

Physicist and AI engineer with a decade of production experience across data engineering, backend systems, and applied AI — now building LLM-native applications. Came up writing code by hand (BASIC to FORTRAN, Lisp, Ruby, Python); now directs LLMs with precision to ship faster without losing engineering judgment. Background in ETL pipelines, database architecture, and distributed systems. Works best in small, async-first remote teams where breadth matters.

Personal Projects (2025–present)

Built entirely with LLM-assisted development (Claude Code, Cursor) — shipped fast, production-quality.

Artificier — TTRPG campaign management tool

Streamlit app using Claude API to generate coherent dungeons, NPCs, towns, monsters, items, and plot threads from campaign context. Multi-entity data model with structured context handling.

Python · Streamlit · Claude API

RoboRally — Multiplayer browser board game

Full replica of RoboRally. Backend complete with 234 passing tests (TDD). Used Claude Code for rules research and extraction from source material.

Python · FastAPI · WebSockets · React · TypeScript · Three.js

VoidRunner — 2D space trading and combat game

Browser-based game with procedural world generation, layered combat systems (shields/armour/energy), and TensorFlow.js AI pilots. Full GDD, roadmap, and phased build plan in place.

TypeScript · Vite · HTML5 Canvas · TensorFlow.js

Soma — Personal AI life-management system

Three-component agentic system over a markdown “second brain.” *Memo* (Telegram bot) handles low-friction capture; *MDBrain* (Claude Code operating on the life folder) does the reasoning — processing, routing, and editing under defined rules; *Iris* (ambient terminal dashboard) renders live state, read-only. Strict separation of concerns: capture never decides, display never edits. Daily production use.

Python · Claude Code / Claude API · Telegram Bot API · systemd · Markdown

TAOADHD Bot — LLM-powered content bot

Generates themed meme content for an Instagram page. Card-based prompt system with LLM generation pipeline.

Python · Telegram Bot API · Claude API

Professional Experience

HexagonX — London, UK (Remote)

Data Engineer | AI Developer | Full-Stack Developer · 2019–2022

- Designed, developed, and maintained ETL pipelines for large-scale data ingestion
- Implemented and optimized PostgreSQL, MongoDB, and Neo4j databases
- Integrated APIs from multiple external data providers
- Collaborated with data science teams on algorithm development and improvement
- Backend development in Python (Pyramid)

Termitnjak d.o.o — Ljubljana, Slovenia (Remote)

Developer · 2018–2019

- Technical feasibility studies for software solutions
- Architecture and technology evaluation

Cerebro Digital — Mexico City

Full-Stack Developer · 2017–2018

- Built science-oriented social sharing platform with gamification systems
- Backend: Node.js, Express, Sequelize · Frontend: Vue.js · Database: MySQL

Freelance / Startup — Mexico

Full-Stack & Lead Developer · 2013–2018

Nubenautas (2014–2018): Web services management platform — DNS, domains, hosting, VPN, SSL. Integrated APIs from DNSimple, Rackspace, Linode, Google GSuite.

Selected projects: Metabot (algorithmic crypto trading, backtesting with Enigma Catalyst), Minando x México (crypto fundraiser for 2017 earthquake relief), Love4Ink, LigaGO.mx.

Technical Skills

Languages: Python · JavaScript · TypeScript · Ruby · Lisp

Backend: FastAPI · Flask · Pyramid · Express · WebSockets

Frontend: React · Vue.js · HTML5 Canvas · Three.js

Databases: PostgreSQL · MySQL · MongoDB · Neo4j

AI/LLM: Claude API · prompt engineering · context management · agent architectures · LLM-assisted development

Data: ETL pipelines · time series analysis · ML (supervised/unsupervised)

Tools: Git · Streamlit · Telegram Bot API · TensorFlow.js · Vite

Education

MSc in Artificial Intelligence — Universidad Veracruzana, Xalapa, Mexico · 2011–2013

Research stay: Complex Systems Laboratory, Università del Piemonte Orientale, Italy (2013)

BSc in Physics — UNAM, Mexico City · 2002–2010

Languages

Spanish — Native · English — Fluent · Slovenian — Basic
